

# Klausurprotokoll Ersttermin SS25

---

## 1) Process Discovery

---

### 1.1)

Given a text of a startup that has the following attributes: Remote, flexible work time, ticket system to track workflow: Name two Process Discovery methods that would work in that environment and why. Name two methods that wouldn't work and why. (Both each evidence & dialog-based)

### 1.2)

## 2) BPMN

---

### 2.1)

Model with a given text (pretty much the same as in the exercise)

### 2.2)

Explain an existing BPMN with multi-instance activities

## 3) Process Analysis (Quality)

---

### 3.1)

Why do you have to be careful when minimizing/eliminating BVA processes, name two aspects.

### 3.2)

Value Added analysis on a bpmn modeled process -> If there are things that could be seen as two things at the same time (BVA and NVA i.e), quickly explain why.

## 4) Process Redesign

---

### 4.1)

Name all 3 axes with their endpoints and explain each of the 6 directions in one sentence

## 4.2)

Given a text: "Es wird zeit für Veränderungen [...]. Es muss sich neu erfunden werden [...]. Komplett neue Dienstleistungen, die es so noch nicht gab [...]." Which of the 8 orbit spaces does this text apply to and what is a method that can be used from that space?

## 5) Process Mining

---

### 5.1)

Explain 4 of the methods of process mining by discussing the in- and outputs

### 5.2)

Dependency Graph with different weights (10, 15, 25, 20, 30)

## 6)

---

## 7) Process Technology

---

### 7.1) Advantages BPMS

Explain 4 given advantages of BPMS

### 7.2) Execution semantics

Graph with Business Process Environment, Process Engine and two Service Providers given

-> Explain n, e, t, s

-> Explain roughly how each of the participating parts work in that diagram (Business Process Environment, Process Engine, Service Providers)
